PROFESSIONAL SUMMARY

Full-stack developer with 4 years of experience building and shipping web and mobile products end to end – React and React Native on the front, NestJS APIs on the back, and the infrastructure they run on. Ships to production independently: self-hosted Linux servers, Docker, CI/CD, and App Store/Google Play releases, with no dedicated DevOps engineer. Available for remote roles, full overlap with European hours.

SKILLS

Frontend / Mobile: React, React Native, Next.js, TypeScript, JavaScript (ES6+), Redux / Context API, Tailwind CSS, Expo, HTML5, CSS3

Backend: NestJS, Node.js, Express, REST API design, PostgreSQL, MongoDB, Redis, Supabase (incl. RLS), Socket.io, authentication (JWT/OAuth)

Infrastructure & DevOps: Docker & Docker Compose, Linux VPS administration (Hetzner), AWS EC2 & S3, GitHub Actions CI/CD, Cloudflare DNS/SSL, server hardening (SSH keys, firewall rules, deploy users), Android & iOS store deployment

Integrations: Paystack (Dedicated Virtual Accounts, Transfers API), Stripe (webhooks), Sanity CMS, Google Sheets API

Tooling & Async: Git, GitHub, Postman, Figma, Slack, Notion, ClickUp

EXPERIENCE

Xavier Paisley · Software Developer (Intern → Full-time) January 2024 – Present

- Joined as an intern and promoted to full-time after 6 months (July 2024), taking on increasing ownership across multiple live products
- Sole developer of RentSell (rentsell.net), a verified real estate brokerage platform built with Next.js, Supabase, and Sanity CMS – multi-role access for buyers, agents, and admins, with property listings, due diligence reports, title verification, and a full reservation and payment plan flow. Live across 6 states with 42+ verified listings and 150+ certified agents
- Built backend API sections (NestJS) and the complete React admin dashboard for FuelRescue (fuel-rescue.com), an on-demand fuel delivery product, now live on both App Store and Google Play
- Handled FuelRescue's server deployment with no dedicated DevOps engineer – Docker containers on AWS EC2, SSH access, and CI/CD pipeline setup – and personally ran the full App Store and Google Play submission process including build config, store listings, and compliance
- Contributed to HealthSure (healthsure.co), a live health insurance platform connecting users with HMO providers, working alongside the lead frontend developer
- Built crossrivercentral.com, a senate campaign site covering 66 wards across 6 LGAs, with a Google Sheets–integrated public pledge system, ward directory with dynamic LGA filtering, and a project accountability dashboard

Freelance & Contract Work · Full-Stack Developer March 2026 – August 2026

- **ScoutMate Pro** (scoutmate.pro) – contracted as the full-stack developer to take a football pitch-booking app, where players find and book pitches, organise matches, and pay for the slot, through to store release. Rebuilt the NestJS API and redeployed the stack (API, MongoDB, Redis) with Docker Compose on a Hetzner VPS I provision and maintain, with uploads offloaded to S3. Worked across the React Native mobile app and the backend, then handled both store submissions. Live on Google Play and the App Store as "ScoutMate Pro"
- Other React and React Native contracts delivered end-to-end; available for further engagements on request

Smuv Legacy (ZedApp) · React Native Developer (Intern) October 2024

- Interned on the mobile team during a UI revamp of ZedApp, a utility app with millions of downloads on Google Play
- Rebuilt multiple app sections inside a large-scale production React Native codebase; formed the foundation of my mobile expertise
- Reference available from CTO on request

PROJECTS

PitchPlay · Football Competition Management SaaS · Founder & Developer

NestJS · TypeScript · Supabase (RLS) · Redis · Socket.io · React · React Native | Live at pitchplay24.com, organiser dashboard at app.pitchplay24.com

- Sole founder and developer of a live multi-role SaaS for football organisers, team managers, and fans
- Designed the architecture from scratch, including an organiser/fan module split and role-based access enforced through Supabase RLS
- Built live score and statistics updates with real-time event broadcasting over Socket.io, plus competition standings

- Implemented a NestJS caching layer backed by Redis that absorbs public fan traffic rather than passing it through to the database
- Provisioned and maintain the production infrastructure independently – Docker Compose, self-hosted database and Redis on a Linux VPS, behind Cloudflare DNS and SSL

EDUCATION

University of Nigeria, Nsukka · B.Eng. Electronics & Computer Engineering 2019 – 2024

Relevant coursework: Microprocessors & Embedded Systems, Computer Hardware, Networking Engineering, Artificial Intelligence, Digital Electronics, Computer Architecture, Control Engineering

Available for async collaboration · Open to freelance, contract, and full-time remote roles
